The feature of a detection function for detecting a selection signal wherein either the caller terminal or the call destination terminal is selected from the audio signal inputted from the interpreter terminal and the function for suppressing the interpreter audio selection wherein the audio from the partner not selected by the selection signal detected by the detection function i.e. the audio from the interpreter terminal supplied to the first audio transmission function or the audio from the interpreters terminal provided to the second audio transmission function, is suppressed, is not disclosed in any of the documents cited in the international search report. Moreover, it is not obvious to a person skilled in the art.

Furthermore, a bi-directional simultaneous interpretation service-providing system in which a caller, a conversation partner, a first interpreter who interprets the language of the conversation partner into the language of the caller, and a second interpreter who interprets the language of the caller into the language of the conversation partner are linked by a videophone link, said system having a function wherein the caller terminal, the

call destination terminal, the first interpreter terminal and the second interpreter terminal are connected via a connection means, and an image containing at least an image from the call destination terminal and an audio containing at least the audio from the first interpreter terminal are transmitted to the caller terminal via a communication means;

a function wherein an image containing at least an image from the caller terminal and an audio containing at least the audio from the second interpreter terminal is transmitted to the call destination terminal;

a function wherein an audio containing at least audio from the call destination terminal is transmitted to the first interpreter terminal; and

a function wherein an audio containing at least the audio from the caller terminal is transmitted to the second interpreter terminal, wherein the caller terminal and the call destination terminal are interconnected in such a manner so that the required interpreted audio is supplied via the first interpreter terminal and the second interpreter terminal, is not disclosed in any of the documents cited in the international search report.

Moreover, it is not obvious to a person skilled in the art.
